

Base price reference dates

List

About filters and finding data in lists

The list has no filter with fields; all rows are loaded at once. The **Search box** narrows the display by all columns, looking up the category by its displayed name (e.g. *Food*, *All other*). The list is sorted by category and, within a category, by **{Valid from}** descending, so that the current rule of every category comes first; clicking a column header changes the sorting.

Columns

- **Category** — FMCG category the rule applies to; for items and services without a category *All other* is shown.
- **Valid from** — Date from which the rule applies, as a rule the day the regulation takes effect.
- **Reference date** — Day whose price is displayed as the base price; shown in bold because it is the date customers see on the label next to “Price on”.
- **Regulation** — Source of the rule, e.g. *NN 75/25*, *NN 101/26*.
- **Description** — One-line explanation of the rule; may be empty.

A new rule is added with the + icon at the bottom of the list, and selecting a row opens the *Edit* dialog.
