~ BASIC ~

{Service revenue account}

Shown only for items of type *Service*.

Sets the revenue account to which sales of this service are posted in the automatic invoice postings, instead of the default service revenue account.

The drop-down list offers only the accounts whose ***{Show in list}*** field in the chart of accounts holds the value *Services (revenue)*. If the account you need is not in the list, set that value on the account in the ***[Chart of Accounts]*** form.

Examples

Accounts commonly set on individual services:

- *Deposits received (lease of business premises)*
- *Revenue from lease of business premises*
- *Revenue from the sale of tangible fixed assets (in use and depreciated)* — on the service for selling a fixed asset without the Fixed Assets module
- *Revenue from re-invoiced costs (electricity, water, utility charges, waste collection, insurance premiums etc.)*
