Food and Beverage

Food and beverage (F&B) is an item from the catering offer, prepared and sold in the outlet. It is non-material, so it carries no stock of its own — stock is carried by the raw materials the F&B item is prepared from.

[Stock accounting in F&B](#)

Relieving the raw materials

- The raw materials relieved by a sale are set by a [recipe](#), separately for every department the F&B item is sold in.
- Relieving is triggered by confirming the [daily turnover](#).

The quantity of raw materials relieved is also affected by two item data, **{Technological surplus}** and **{Processing loss (waste) in F&B}**, described on the ~ [BASIC](#) ~ tab.
