About payment methods

Paypal/PaymentGW

The *Paypal/PaymentGW* payment method is used for invoices paid through PayPal and similar online payment services. With it the invoice shows the ***{Card Company}*** field, so the card company must be entered in partners — see the prerequisites in Card.

Recording the payment

Whether approving the invoice creates a bank transfer pay-in depends on whether the company keeps its accounts in Brix — see Payments against an invoice.

Fiscalisation

In ***F1*** fiscalisation *Paypal/PaymentGW* is treated as a transactional payment method. Which protocol an invoice is fiscalised under is described in Sending invoices to F1 or F2.0 fiscalisation.

The PayPal account must be reported to the Tax Administration as a foreign currency account with a foreign bank.
