Business solutions

# Inventory

## List

The list shows:

- Full item name (item name and variation name)
- Stock levels in stock UoM (in the selected department)

## Data

- Minimal Stock Levels - If the stock quantity level falls below this quantity it will show up in the **To order** report.
- Optimal Stock Levels - Used to calculate the quantity that needs to be obtained/purchased:
  - //Purchase Quantity = Optimal Stock Level - Current Stock Level

//

## Reports

- **Stocks**
  - *Qty in Unconfirmed Goods Receipts* - Quantities in partially approved Goods Receipts. These quantites can not be issued or sold.
- **To order** - Based on the Minimal and Optimal Stock Levels the report will give a list of what and how much needs to be ordered.
- **Item turnover**

## Procedures

- Changing the accounting of stock levels from item to variations or reverse
- Transfer stocks from between departments
